Micro-vented Fabric-Backed Wallpaper Benefits	<p>Tiny hole perforations</p> <p>1. Breathability : The micro-vented design enhances airflow, helping to reduce the likelihood of moisture buildup between the wall and wallpaper. This promotes a healthier indoor environment by lowering the risk of mold and mildew growth.</p> <p>2. Easy Installation : Microventing facilitates easier and more precise installation, reducing the likelihood of air bubbles or imperfections during the application process.</p>

BREATHING WALLCOVERINGS MICRO-VENTED WALLCOVERINGS

DESIGN INSPIRATION

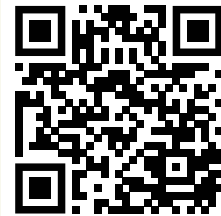

Fabric-backed wallcoverings are a popular choice for commercial facilities due to their design versatility, eco-friendliness, and essential fire-resistant properties for public spaces. However, many wallcoverings used in residential and commercial settings are made from non-permeable materials. While these materials perform well in creating aesthetically pleasing spaces, their use in humid environments may lead to potential issues, such as mold growth.

MICRO-VENTED FEATURE

We have incorporated 100,000 tiny holes per square meter of material, allowing moisture from the wall to pass through and helping to regulate wall humidity. This micro-vented design is invisible to the naked eye, preserving the colors and patterns of the decorative material while also reducing the risk of bubbling during installation.
