GRAND ART

GA-3600 Sustive Back

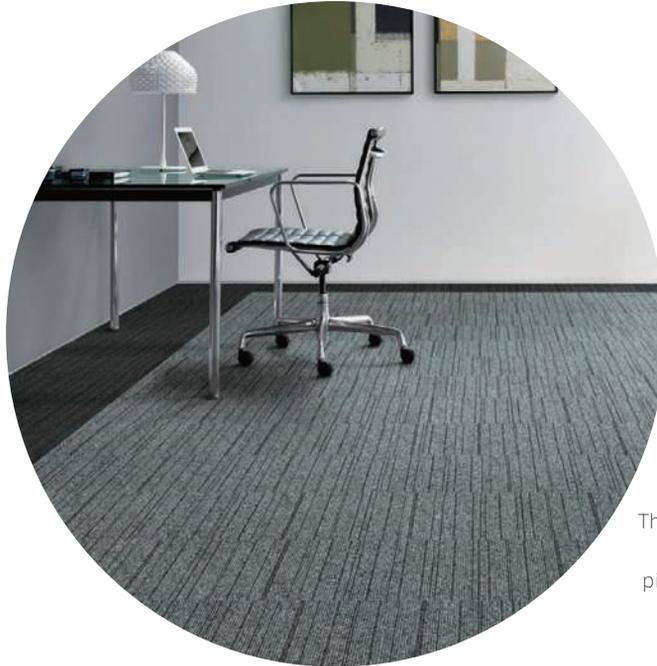

GA-100 series

History

Ever-Evolving GA series

With their reliable quality and high designability, GA-100 series and GA-3600 Sustive Back have been used in various kinds of spaces such as offices, hotels, shops, and public facilities for long-standing years.

**GA-100W
launched.**

The products with a lineup of various patterns such as pinstripes and herringbone.

2010

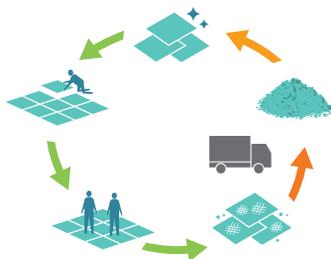

**GA-100
launched.**

Japan's first carpet tile product with PVC backing. Now it's our flagship product proud of long-standing achievements and high reliability.

1982

2000

Started to operate TTR System (TOLI Carpet Tile Recycling System).

2007

GA-100 series
Cumulative sales exceeded
100 million m².

2006

**GA-100S
launched.**

Product with a modern-striped pattern. Its basic impression will bring variations in the room.

Started to operate TOLI Carpet Tile Recycling (based on the wide-area certification system).

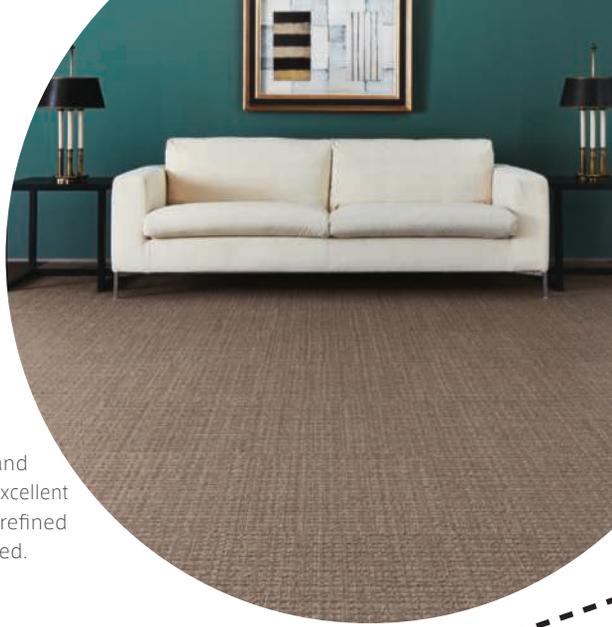

TOLI's used carpet tiles can be now collected by ourselves.

2013

GA-100T launched.

Carpet tiles with volume and texture of rich piles, along with excellent cost-performance. Classy and refined room scenes can be created.

2017

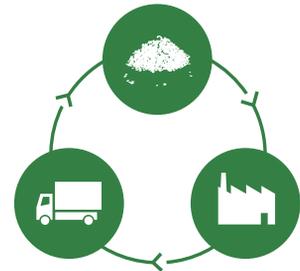

2022

GA-100 series
Cumulative sales exceeded
200 million m²

Established TOLI Complete Recycling System

TOLI Group has established a closed-loop horizontal recycling system – collecting used carpet tiles, recycling, and manufacturing new products within the group.

All GA-3600 products feature Sustive Back.

For details on Sustive Back, refer to page 18 to 21.

2015

GA-100 Series won "Good Design Long Life Design Award".

LONG LIFE DESIGN

2012

GA-3600 launched.

Products inspired by the natural beauty of lake, earth, and bark. Calm and relaxing spaces can be created.

Toward the promotion of the "TOLI Complete Closed-Loop Recycling System"

TOLI Group has established the original complete-recycling technology of used carpet tiles (including post-consumer waste and factory scraps) without separating the surface pile layer and the backing layer. In 2021, Shiga TOLI Co., Ltd. launched the "Carpet Tile Recycling Plant," enabling closed-loop horizontal recycling, by which nearly 100% of used carpet tiles can revert to raw materials. We will continue to expand the "TOLI Complete Closed-Loop Recycling System" in the carpet tile business, where TOLI is accounting for a big market share in Japan.

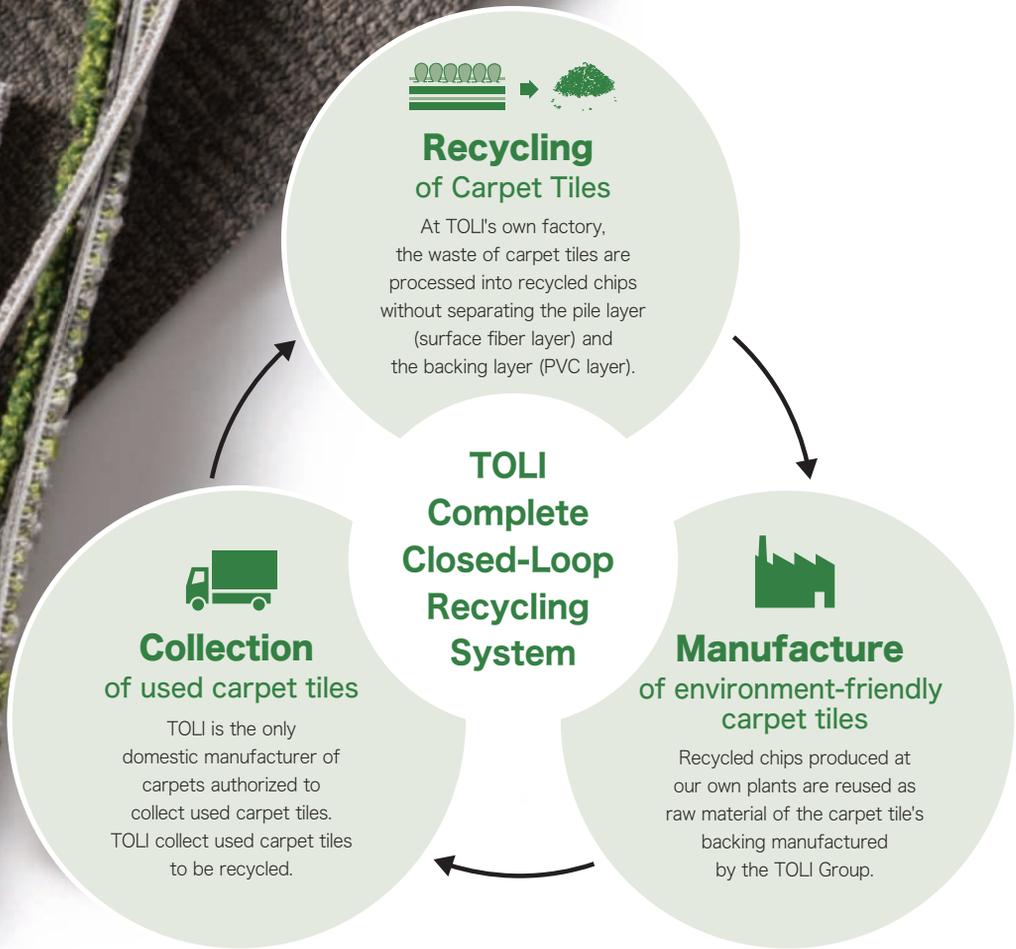

Collected used carpet tiles
Scraps materials generated during the production of carpet tiles

Carpet tiles with Sustive Back

Crushed overall tiles without separating the surface layer from the backing layer.

Recycled chips

Environmental Impact Reduction Effect through the Wide-Area Certification System

On condition that used carpet tiles are 100% recycled

	emission	Emission reduction effect
Industrial waste ^{*1}	1,000m ²	approx. 5[t]
CO ₂ ^{*2}	1,000m ²	<p>approx. 5.2[t-CO₂]</p>  <p>Equivalent to 595 cedar trees</p> <p>Calculated based on Forestry Agency data (1 cedar tree = 8.8kg-CO₂/year).</p>

*1: The emissions utilizing the Wide-Area Certification System must be excluded from administrative reporting via manifests and will be excluded from the industrial waste emissions of the waste generator. The waste of carpet tiles is calculated at 5 kg/m².

*2: CO₂ reduction amounts through recycling from industrial waste are calculated based on recycling rate, as a converted value. The distance from the waste-generating facility to the primary processing facility (TOLI Atsugi Factory) is set at 60 km, which is compared with production without using recycled materials.

Wide-Area Certification System : A special system aimed at ensuring the reduction and proper treatment of waste by allowing businesses involved in the manufacture, processing, or sale of products (manufacturers, etc.) to handle the disposal of such products, which have become waste, on a wide-area basis, thereby exempting them from the need for permits from individual local governments, which is a fundamental requirement of the waste disposal industry's legal framework. (Source: Ministry of the Environment website)

(Target area)
 Metropolitan areas in Japan
 This waste disposal for recycling is only available within Japan.

(Recyclable floor covering)
 Waste of used carpet tiles with PVC backing
 manufactured by TOLI *Household waste is not included.

Function

Reliable quality established through long-term experience

Commitment to quality since launch

Stain-resistance

Water-repellent and stain-release finish

The water-repellent and stain-release finish makes it difficult for dirt to adhere, maintaining a beautiful appearance for a long time. It repels water and other contaminants, and wiping it off immediately prevents stains.

Results of water repellency test

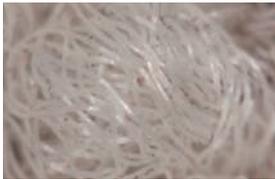

Water-repellent and stain-release finish

Without stain release finish

*Some yarns, such as those with hollow fibers, are called anti-stain yarns because they have the property of making the dirt inconspicuous, but they are not in fact water repellent. TOLI carpet is protected against dirt thanks to the application of water repellent finishes.

Observation with a microscope

Water-repellent and stain-release finish

Without stain release finish

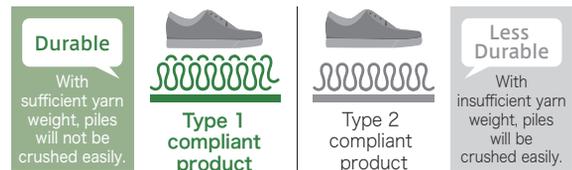

Durability

Durable BCF nylon

All the products of GA-100 series and GA-3600 Sustive Back are using highly durable BCF nylon. Compared to other materials, BCF nylon is characterized by its resistance to pile crushing and high resilience even when crushed.

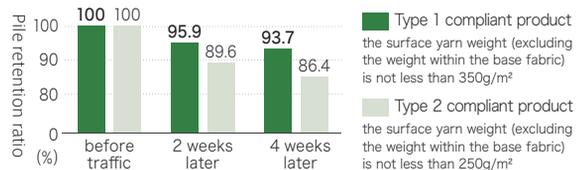

Excellent durability with sufficient pile density

For all the products in GA-100 series and GA-3600 Sustive Back, the surface yarn weight (excluding the weight within the base fabric) is not less than 350g/m². This meets the requirement of the Standard Specifications for Public Construction Works, Type 1, in Japan and ensures high durability.

*Though BCF nylon is excellent in durability, if the yarn volume is not enough to support each other, piles can be easily crushed down.

Durability difference by yarn weight Traffic: approx. 2500 walkers/day

*The values are based on our proprietary testing and are not guaranteed.

Maintenance services in Japan only

Off-Location® System

There are some stains on carpet tiles that cannot be removed with daily maintenance. In TOLI Off-Location® System, the tiles are periodically taken back for cleaning. In combination with regular maintenance, this system significantly extends the aesthetic longevity of facilities.

TOLI established this system in 1985 and received the Good Design Award in 2008.

Refresh service and make-up service

This service can revive dirty carpet tiles.

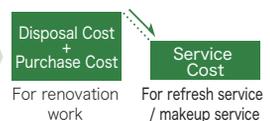

Promises a clean and beautiful finish

Comparison before and after cleaning

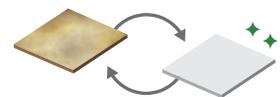

Cost effectiveness by eliminating disposal and re-purchasing costs

Cost Comparison Image

Global Environment-friendly Contributing to Eco-Friendly by Reducing Waste

Certification

CASBEE

Comprehensive Building Environment Performance Evaluation System

CASBEE (Comprehensive Assessment System for Built Environment Efficiency) is a method developed in 2001 under the leadership of the Ministry of Land, Infrastructure, Transport and Tourism, within a committee established at the Institute for Building Environment and Energy Conservation, to evaluate and rate the environmental performance of buildings. It comprehensively assesses a building's environmental performance, encompassing not only aspects like energy conservation, resource efficiency, and recycling performance for reducing environmental impact, but also improvements in environmental quality and performance, such as indoor comfort and consideration for the surrounding landscape.

classification	characteristic	evaluated product
Q1 Indoor Environment	1.3 Sound Absorption	Carpet (in general)
	4.1 Source Control Measures	Carpet Tile (in general)
Q2 Service Performance	1.3 Designed for Proper Maintenance	Carpet with Stain Resistant Finished
LR 2 Materials and Resources	2.4 Using Recycled Materials	Green Purchase Law Certified Products / ECO Mark Certified Products (For details, see below.)

*Evaluated products are determined by TOLI. Officially, it depends on the judgment criteria of the relevant local government or other authorities.

ECO Mark Certified Products

Eco Mark is a mark reviewed and certified by the Japan Environment Association.

Products recognized as having a low environmental impact and contributing to environmental conservation throughout their entire lifecycle, from "production" to "disposal."

ECO Mark Certified Products : (regular stock product)

All the products of GA-3600 Sustive Back and GA-100EM are certified.

*For the products using recycled materials, the color and surface finish of the backing may show some variations, but there are no issues with quality.

Green Purchase Law Certified Products

The unified labeling mark for "Green Procurement Law Compliant Products" established by the Interior Fabrics Industry Revitalization Council

The compliance condition includes that the total of unused fibers, recycled fibers, recycled plastics, and other recycled materials is accounting for not less than 25% of the overall product in weight.

Green Purchase Law Certified Products : (regular stock product)

All the products of GA-3600 Sustive Back and GA-100EM are certified.

*For the products using recycled materials, the color and surface finish of the backing may show some variations, but there are no issues with quality.

LEED (Leadership in Energy & Environmental Design)

International Environmental Certificate

LEED is an environmental performance evaluation system for buildings developed and operated by the U.S. Green Building Council (USGBC), a U.S. nonprofit organization.

LEED certification is increasingly being pursued not only in the U.S. but worldwide (source: USGBC website).

In Japan, projects prioritizing environmentally friendly building materials are increasingly evaluated based on whether products contribute to earning LEED points.

Green Label Plus

Contributes to Green Building Rating System

All the nylon carpet tiles with PVC backing from TOLI are CRI Green Label Plus certified.

What is Green Label Plus?

Indoor air quality certification system established by the Carpet and Rug Institute (CRI) in the United States. Using Green Label Plus certified products contributes to earning points under the "LEED v4 EQ Credit Low-Emitting Materials" category of LEED certification.

SuMPO EPD

The environmental label operated by the Sustainable Management Promotion Organization (SuMPO).

The environmental label operated by the Sustainable Management Promotion Organization (SuMPO), which verifies and discloses quantitative environmental impact data of products obtained through LCA. It was renamed from Ecolabel in 2024.

It is a "Type III environmental label" and is one of the EPD certification systems. Obtaining SuMPO EPD certification contributes to earning points in the "LEED v4 MR Credit Building Product Disclosure and Optimization - Environmental Product Declarations" category of LEED certification.

SuMPO EPD Certified Products : (regular stock product)

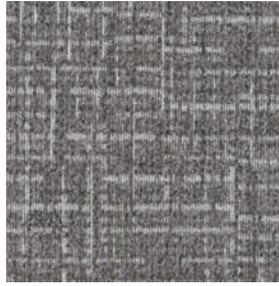

All the products of GA-3600 Sustive Back and GA-100EM are certified.

TOLI's eco-friendly backing for carpet tiles

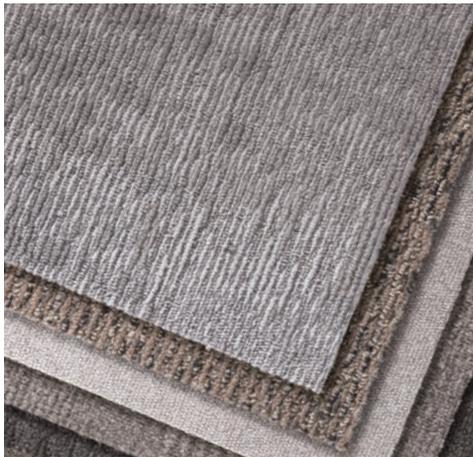

Sustive Back

Sustive Back is the exclusive name for our carpet tile backing which includes recycled chips for TOLI's environment-friendly carpet tiles. Recycling of carpet tile waste materials will contribute to the reduction of industrial waste emissions.

In addition to aiming for zero emissions within the TOLI Group (carpet tile production plant), we will work to expand the recycling of used carpet tiles from the market in the future.

1 Collection

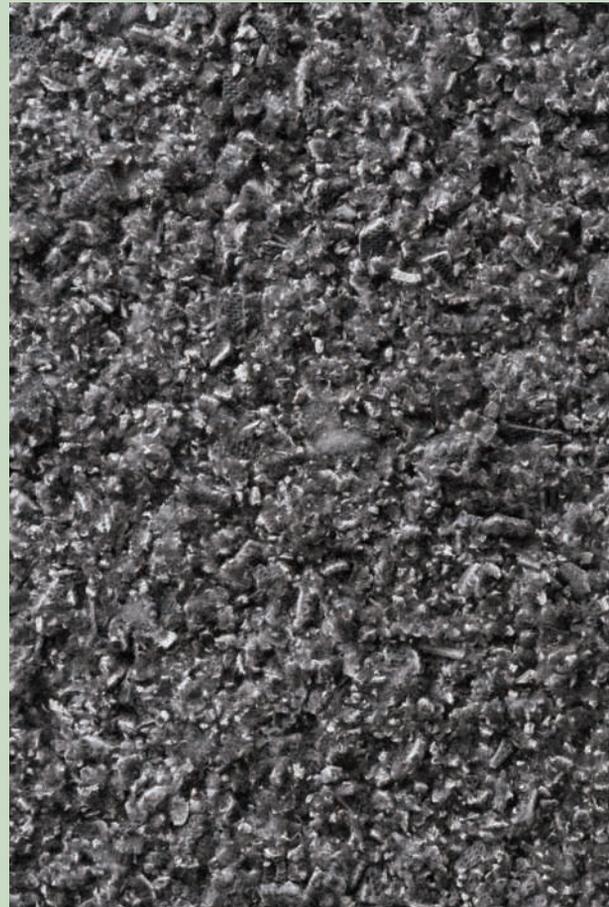

Collected used carpet tiles

*2: Calculated based on the SuMPO Environmental Label Program.

Advanced material recycling to dispose of different materials altogether

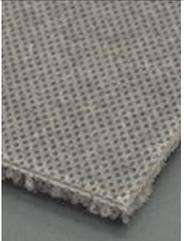

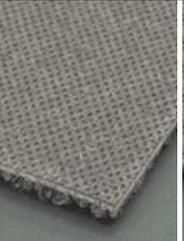

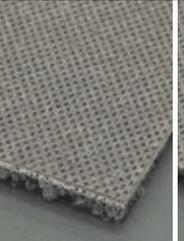

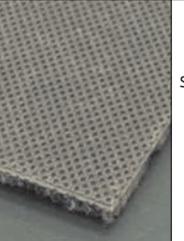

Advanced material recycling is the recycling method to create new products without separating materials of collected waste. In our main carpet tile factory Shiga TOLI, we introduced "Carpet Tile Recycling Plant", where carpet tiles (postconsumer waste and wastage from the production) are processed into recycled chips, the material for new carpet tiles.

Carpet Tile Recycling Plant

V: vertical direction H: horizontal direction

*1: JIS L 4406 "Carpet tile": In-house measured value (not a guaranteed value)

No appearance change nor quality deterioration can be seen on the Sustive Back.

The carpet tiles with Sustive Back are the sustainable products with reliable quality that **can be repeatedly recycled.**

A thickness reduction

Abrasion testing to check the durability of piles to dynamic loads. The lower number indicates the more durable carpet tile.

B tuft bind

Tuft bind testing to check the pile strength by pulling one pile from tensile testing Machine.

C dimension stability (heat/water)

Dimensional stability testing under heat and water, considering various installation environments. Lower values indicate superior dimensional stability.

D dimension stability (caster)

Dimensional stability testing assuming the use of casters in environments like offices. Lower values indicate superior dimensional stability.

MAPLE WEAVE

Bark of tree is expressed by the lattice pattern with intersecting lines and rich colors. The strength and delicacy of nature is woven in the design.

Monolithic

GA36601

Composition	Pile	BCF Nylon 100% (Solution Dyed Nylon)
	Backing	PVC + Glass Fiber (Sustive Back)
Specification	Pile length	H5mm to L3mm
		Textured Loop Pile
	Overall thickness	7mm
	Dimensions	500mm×500mm
		1/10 gauge 11.0 stitches
	Packaging	16 pcs. (4㎡)/box

Flame retardancy / Test number E2250131
 Antistatic property / Antistatic property on human body 1.0kV or less (JIS L 1021-16: 23°C, 25%RH, Synthetic rubber sole)
 Stain-Resistant / Water-repellent and stain-release finish

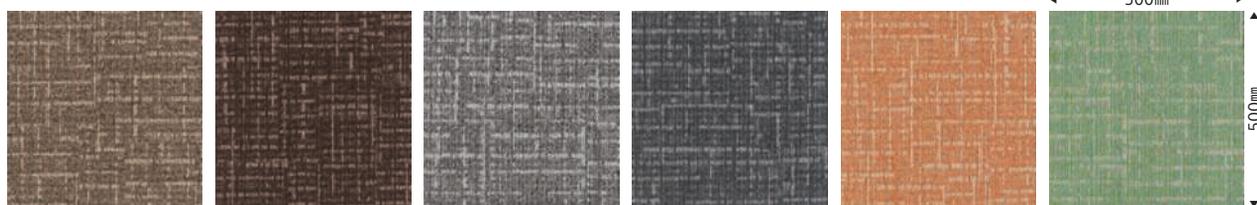

- Can be installed either in quarter turn or monolithic direction.
- In case that color shadings or tile joints are too obvious by monolithic installation, interchange the tiles partially so that it will look natural.

SWAN WAVE

Inspired by the ripples of water.

The delicate overlapped curves create a sense of spaciousness in the room.

GA36402 · TTN1304 (Loose Lay Tile) 

Composition	Pile	BCF Nylon 100% (Solution Dyed Nylon)
	Backing	PVC + Glass Fiber (Sustive Back)
Specification	Pile length	H5.5mm to L3mm
		Textured Loop Pile
	Overall thickness	7mm
	Dimensions	500mm×500mm
		1/10 gauge 11.0 stitches
	Packaging	16 pcs. (4㎡)/box

Flame retardancy / Test number E2250129
 Antistatic property / Antistatic property on human body 1.0kV or less (JIS L 1021-16: 23°C, 25%RH, Synthetic rubber sole)
 Stain-Resistant / Water-repellent and stain-release finish

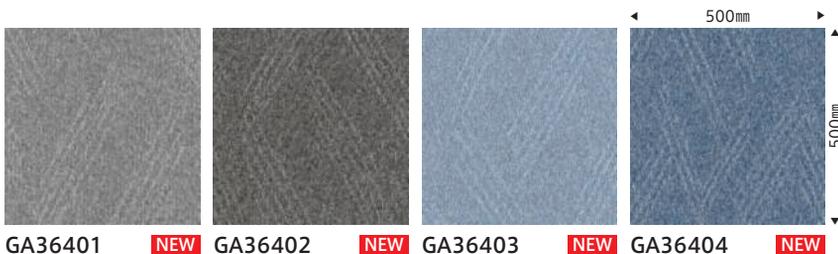

- Can be installed either in quarter turn or monolithic direction.
- In case that color shadings or tile joints are too obvious by monolithic installation, interchange the tiles partially so that it will look natural.

*For the time being, JIS-certified products and pre-certified products will coexist. If you require JIS-certified products, please contact TOLI sales reps.

GA36404

FROST VEIL

The scene of a frozen waterfall is expressed with faint lines and shaded uneven textures. It brings a sense of coolness and serene beauty to the space.

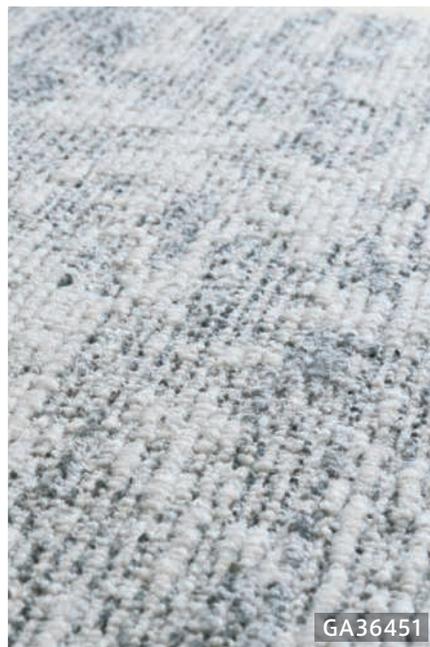

GA36454 Monolithic

Composition	Pile	BCF Nylon 100% (Solution Dyed Nylon)
	Backing	PVC + Glass Fiber (Sustive Back)
Specification	Pile length	H5mm to L3mm
		Textured Loop Pile
	Overall thickness	7.5mm
	Dimensions	500mm×500mm
		1/10 gauge 11.0 stitches
	Packaging	16 pcs. (4㎡)/box

Flame retardancy / Test number E2250130
 Antistatic property / Antistatic property on human body 1.0kV or less (JIS L 1021-16: 23°C, 25%RH, Synthetic rubber sole)
 Stain-Resistant / Water-repellent and stain-release finish

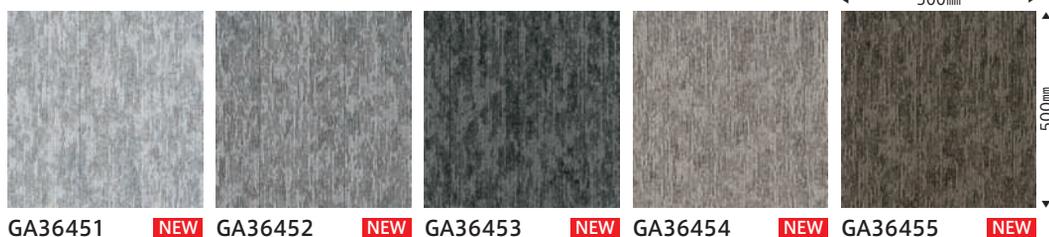

- Can be installed either in quarter turn or monolithic direction.
- In case that color shadings or tile joints are too obvious by monolithic installation, interchange the tiles partially so that it will look natural.
- To have a natural image after installation, stripes are intentionally inserted in the design at regular intervals, which is not a manufacturing defect. If the design looks unnatural after installation, interchange the tiles partially so that it will look natural.

GA36451

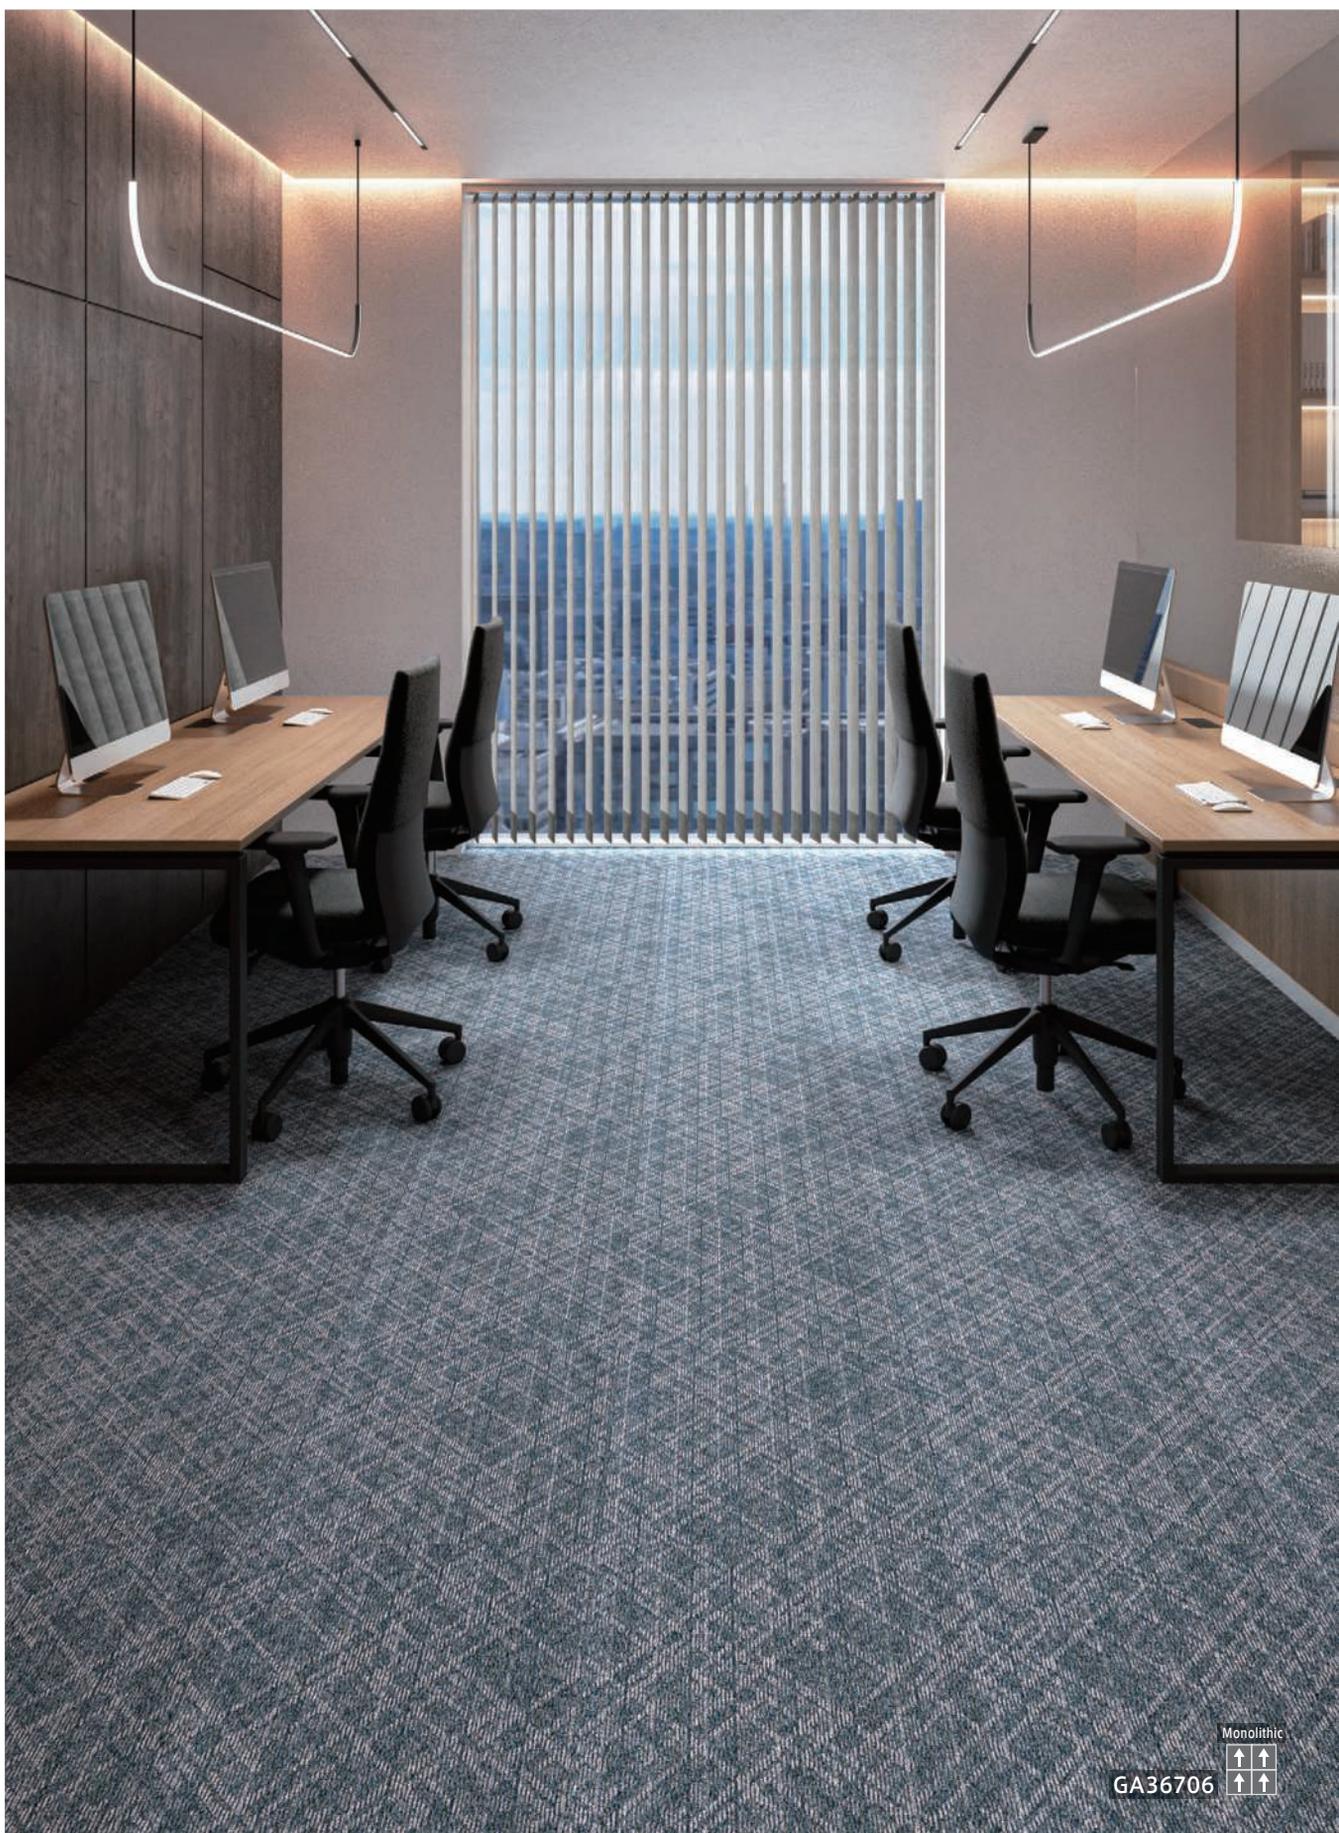

*For the time being, JIS-certified products and pre-certified products will coexist. If you require JIS-certified products, please contact TOLI sales reps.

SHINE RHOMBUS II

Inspired by translucent image of broadly-spread ice on the lake surface. Crossed diagonal lines will provide a sense of depth.

GA36702 · GA36705  TTN1304 (Loose Lay Tile) 

Composition	Pile	BCF Nylon 100% (Solution Dyed Nylon)

Please contact TOLI sales rep.

■ GA-100N Application & Usage

- Suitable on the top of raised floors in the office, such as free access floors and OA floors made of metal or resin. However, please note the adhesive strength may weaken if the surface is extremely uneven.

For more information please contact TOLI sales reps.

- Can be installed on the vinyl tiles with a flat surface. If you plan to restore to the original, apply the wax sufficiently on the vinyl tiles before installation.

- Cannot be used in the places where heavy trolleys and carts frequently come and go.

- Cannot be used on the sub-floor that tends to become dusty such as mortar, nor the sub-floor that may extend or shrink such as floor heating.

■ GA-100N does not require adhesive application on the sub-floor.

Antibacterial-finished (for special-purpose)

GA-100FH

[Made-to-Order Products]

< Made-to-Order Colors >

Conditions :

Any standard color of GA-100 or GA-100S

Minimum Order Qty : **300m²** per color

Lead time :

3 weeks after the color is selected.

* The Flame-Retardant Performance Test No. and F☆☆☆☆ Certification No. vary by product type, so please inquire with us for details.

< Composition / Specification >

For base materials of GA-100 or GA-100S.

Product Code is GFH + Color Number.

(e.g.) Antibacterial specification for

GA125 is GFH125.

Flame retardancy / Test number EO050250

Antistatic property /

Antistatic property on human body 1.0kV or less
(JIS L 1021-16: 23°C, 25%RH, Synthetic rubber sole)

Stain-Resistant / Water-repellent and stain-release finish

Antibacterial performance /

SEK Antibacterial finished [SEK Red Mark]

Meets the SEK Special-purpose Standards

(for medical institutions, etc.)

Japan Textile Evaluation Technology Council

(JTETC) Certification No. 027SD07

● Standard way of installation is Quarter Turn.

● For the products with a striped pattern,

the intersections of the joints appear misaligned.

● There may be a slight color difference from the

same color number of GA-100 & GA-100S with

the regular specification.

F☆☆☆☆☆
J08-30530

Way of Installation	Sub-floor	Required Qty of Adhesive
Installed with tackifier adhesive (Adhesives: ECO GA Cement / ECO GA Cement EX)	Steel, Plastics and PVC Tiles	40 to 60g/m ²
	Dry mortar and wooden floors (plywood, etc.)	60 to 100g/m ²

TOLI Carpet Tile Soft Back Plus

Backing(Polyester Felt)

**Excellent walking-feel
(reduces leg fatigue),
sound insulation,
and shock absorption are
the three excellent
characteristics of this product.**

	walking-feel		sound insulation ΔLL grade ^{*2}	shock absorption maximum acceleration ^{*3}	
	Sensory value ^{*1}			G value	m/s ²
	With socks	With shoes			
GA-100W (Soft Back Plus)	5.3	5.1	ΔLL (I)-3	98	960
GA-100W (Product with PVC backing)	4.5	4.4	ΔLL (I)-2	120	1176

*1 A larger numerical value in the test results indicates a higher ability to reduce leg fatigue and a more comfortable underfoot feeling.

*2 The higher the grade number, the higher the floor impact sound reduction performance.

*3 A smaller maximum acceleration value, which is an index of shock absorption, indicates a smaller shock and better shock absorption.

* All data is from in-house tests unless otherwise specified. The values are test values, not guaranteed values.

[Made-to-Order Products]

< Made-to-Order Colors >

Conditions :

Any standard color of GA-100T and GA-100W

Minimum Order Qty : **300m²** per color

Lead time :

6 weeks after the color is selected.

* The Flame-Retardant Performance Test No. and F☆☆☆☆ Certification No. vary by product type, so please inquire with us for details.

< Composition / Specification >

Total thickness of each Product Code + 3.5mm

Product Code is Color Number + FB.

(e.g.) Soft Back Plus model for

GA10712T is GA10712T-FB.

Way of Installation	Sub-floor	Required Qty of Adhesive
Installed with tackifier adhesive (Adhesives: ECO GA Cement / ECO GA Cement EX)	Steel, Plastics and PVC Tiles	*4 60 to 90g/m ²
	Dry mortar and wooden floors (plywood, etc.)	*4 90 to 150g/m ²

*4 As a guideline, the amount of adhesive applied is about 1.5 times that of general carpet tile with PVC backing.

● When placing heavy objects such as furniture, dent marks will remain, so be sure to distribute the load with a floorboard, etc.

● **Cannot be used on underlay sheet for carpet tiles.**

GA1957W-FB

For Evacuation Guidance Photoluminescent Carpet Tile

[Made-to-Order Products]

Carpet tile working as the evacuation guide from the building for a certain period of time in case of a power outage due to a sudden disaster or other reason.

Overall view (basic form)

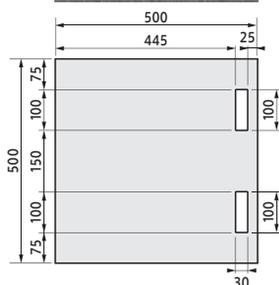

LMT100-2

When attaching two photoluminescent components on the top of GA-100 as the base material

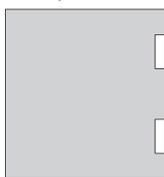

Plane figure

Unit: mm

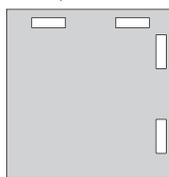

The pattern and number of photoluminescent components can be adjusted.

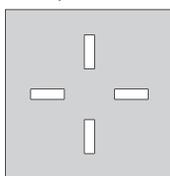

Example 1

Example 2

Example 3

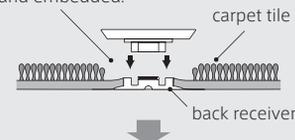

* If four photoluminescent components are required, the price will be revised. Please contact TOLI sales rep.

The protrusions of the photoluminescent material are lowered to reduce the risk of tripping.

The surface pile is mowed and embedded.

The low protrusions reduce the risk of tripping.

Appearance over time and phosphorescence brightness values

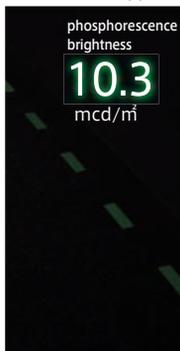

Normal Condition

10 minutes after excitation stopped

60 minutes after excitation stopped

The minimum phosphorescence brightness required at the installed location : JIS Z 9095

- In a normal safety management system, the illuminance of escape routes should be not less than 50 lx (lux) on average at the center of the floor, and not less than 25 lx at the bottom of the wall.
- The following lower limit of phosphorescence brightness must be achieved and maintained as a result of 15 minutes of illumination by the lighting at the installed location. 10 minutes after excitation is stopped: phosphorescence brightness 15mcd/m² or more 60 minutes after excitation is stopped: phosphorescence brightness 2mcd/m² or more * When the width of the induction line is 100mm
- If the product width does not meet the above conditions, the lower limit will change depending on the product width.

■ The lower limit of phosphorescence brightness when the product width is 30mm and our product test results

* Excitation conditions: White fluorescent lamp (4200k) 50 lx 15 minutes

Time after excitation is stopped	The lower limit of phosphorescence brightness	Test results for our product
10 minutes	not less than 50mcd/m ²	50mcd/m ²
60 minutes	not less than 7mcd/m ²	10.3mcd/m ²

< Made-to-Order Colors >

Conditions :

Minimum Order Qty: Not less than 2m² of GA-100 or GA-100S as the base material

Lead time :

2 weeks after PO is placed. (For more than 25m², please contact TOLI sales rep.)

* For changing the base material, please contact TOLI sales rep.

Composition	base material	GA-100/GA-100S
	Pile	BCF Nylon 100%
	Backing	PVC + Glass Fiber
	Luminous material	Polycarbonate (with luminous agent)
Specification	Pile length	(GA-100) H3.5mm Loop Pile (GA-100S) H3.5mm / L3mm High-Low Loop Pile
	Overall thickness	6.5mm
	Dimensions	500mm×500mm 1/10 gauge 13.0 stitches
	Packaging	8 pcs. (2m ²)/box
	Sales Unit	Not less than 2m ² per color on a m ² basis

Flame retardancy / Test number E2160262

Antistatic property / Antistatic property on human body 1.0kV or less (JIS L 1021-16: 23°C, 25%RH, Synthetic rubber sole)

Stain-Resistant / Water-repellent and stain-release finish

Way of Installation	Sub-floor	Required Qty of Adhesive
Installed with tackifier adhesive (Adhesives: ECO GA Cement / ECO GA Cement EX)	Steel, Plastics and PVC Tiles	40 to 60g/m ²
	Dry mortar and wooden floors (plywood, etc.)	60 to 100g/m ²

- There is a receiving device on the backing. Please install as it is.
- Standard way of installation is Quarter Turn.

* A patent for the product structure has been obtained.

〈How to place the order〉

When you customize the base material and photoluminescent components

Inquiry

Please specify the carpet tile as the base material and the pattern of photoluminescent components.

* You can choose from all the TOLI nylon carpet tile products with PVC backing. For photoluminescent components, 3 and more pieces are also acceptable.

TOLI sales rep

Please confirm the price and the delivery time prior to placing the order.

* The estimated price may vary depending on the base material and the pattern of photoluminescent components. Please check the details before you place the order.

Order is placed.

2 weeks after

* For more than 25㎡, please contact TOLI sales rep.

Delivery

⚠ Notes

- Luminescent carpet tiles can be applied to all the nylon carpet tiles with PVC backing from TOLI. This catalog proposes GA-100 and GA-100S as base materials, but for changing the base material, please contact TOLI sales rep.
- Depending on the order quantity, additional delivery time may be required. Please be sure to check the price and delivery time when placing an order.
- Do not make irregular cuts such as notches.
- The luminescent part becomes slippery if water or oil gets on it. Keep it dry at all times.
- Thoroughly clean with a vacuum on a daily basis and minimize the frequency of water or detergent-based cleaning.

For visually impaired people (JIS T 9251 compliant) SG Carpet

[Made-to-Order Products]

* The color of the receiving device will vary depending on the thickness of the tile carpet.

〈Made-to-Order Colors〉

Conditions :

Minimum Order Qty : 2㎡ per same color & pattern (Orders should be placed on a ㎡ basis.)

Lead time :

2 weeks after PO is placed. (For more than 25㎡, please contact TOLI sales rep.)

* For changing the base material, please contact TOLI sales rep.

Stain-Resistant / Water-repellent and stain-release finish

Loose Lay Tile series

A vinyl floor tile that can be laid on the raised floor or mortar sub-floor. Wax maintenance is not required.

For more details of Loose Lay Tile series;

Loose Lay Tile series can be well coordinated with carpet tiles. This combination is working well for differentiating the areas and zoning.

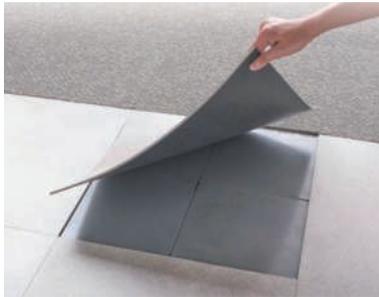

If you spill a drink, simply wipe it off.

01 Can be installed with tackifier

Both GA Series and Loose Lay Tile (NW-EX Series) can be installed with the same tackifier adhesive. Because of that, the tiles can be easily replaced.

02 Can be installed with carpet tiles

Due to the same-sized module, both products can be installed together. The surface of carpet has been designed to be a little thick because your feet sink into the pile when you step on it.

03 Distinctive Standard Features

No need to apply the wax for maintenance.

Antistatic
* except LOOSELAY 50 NW-EX (highly durable)

TOLI Ai Simulator Image Fit

Easy Interior Simulation by Taking a Picture and Selecting!

TOLI Ai Simulator, Image Fit is a simulation system that can easily create an installation image by synthesizing the TOLI interior materials into your design space. It is also compatible with the room image you take with your smartphone, etc., so please enjoy combinations of various product images into your own room image.

From this QR code!

1

Take a photo of the room scene or upload the image.

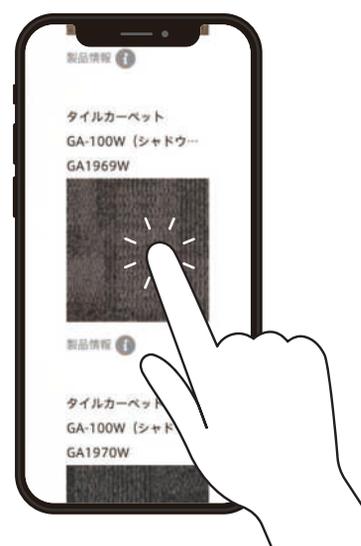

Simulation images can be also made for the following.

- Upload a room scene to be synthesized
- Use the room scenes on a market segment basis prepared in "Image Fit"

2

Choose the color and pattern.

3

Synthesized image completed.

The official app is finally here!

Product search, delivery examples, latest information, and sample requests all in one app.

In addition to product searches, you can also request samples and catalogues, experience 360° VR spaces, and perform construction image simulations.

Lots of convenient features tailored for business users!

SEARCH!

Easily find out what you are looking for.

You can find out the suitable product by product codes, category, market segment.

IDEA!

Introducing AI synthesis, VR experiences, and project references all together.

We provide ideas for selecting interior materials, including spatial simulations and room scene images.

PUSH!

Guide to functional marks & logos

Flame retardant property mark

This is a unified mark defined by the Nippon Interior Association (NIF). It has passed the flame retardant performance test based on the Fire Defense Law in Japan.

Antistatic control mark

This is a unified mark defined by the Nippon Interior Association (NIF). It has passed the NIF standards for antistatic-electricity control.

Antifouling property mark

Indicates the antifouling property of the product. It also has a performance of easy maintenance. Note that daily maintenance is the most effective way to preserve aesthetics.

Walkers' mark

Indicates the durability of the product. Products are comprehensively judged and ranked based on the product specification, pile retention, static-load resistance, and abrasion data.

Commercial 4
Suitable for the areas where there is a heavy traffic of people, trolleys and other heavy objects, such as airports, department stores, shops, offices, schools, hospitals, hall and building lobbies, entrance halls and corridors.

Commercial 3
Suitable for the areas where there is a medium-level traffic of people, such as offices, schools, hospital, offices and hotel banquet halls.

JIS mark

Certifies by the nationally-registered certification body that the product meets the Japanese Industrial Standards (JIS).

Antibacterial finish mark

This certification mark is only given to the products that conform to the regulations of the Japan Textile Technology Council (JTETC). The product has also passed the MRSA antibacterial performance test for (special purpose) products to be used at medical institutions, nursing homes, and other equivalent facilities. The rules and regulations set strict standards for the antibacterial performance against germs, and the effect on the human body.

Eco mark

This product has been recognized as useful for environmental preservation because of its low environmental impact throughout its entire life cycle, from "production" to "disposal."

Green Purchasing Law-compliant product mark

"Green Purchasing Law-compliant products" standardized mark defined by the Interior Floor Industrial Association. Total weight of unused fiber, recycled fiber, recycled plastic and other recycled materials is at least 25% by weight of such product.

SuMPO EPD logo

The environmental label operated by the Sustainable Management Promotion Organization (SuMPO) verifies and discloses quantitative environmental impact data for products, obtained through LCA (Life Cycle Assessment), which evaluates the environmental impact of a product from resource extraction to disposal or recycling. It was renamed from EcoLeaf in 2024.

Environment-friendly product mark

Such products are recommended by TOLI as contributing to the reduction of environmental impact.

F☆☆☆☆ mark

This is a unified mark indicated by the voluntary VOC (formaldehyde) emission standards established by the Interior-Fabrics Performance Evaluation Conference. The F☆☆☆☆ is a top class category.

Good Design Award mark

This product has been awarded the Good Design Award by the Japan Institute of Design Promotion (JDP).

Good Design Long Life Design Award mark

This product has been awarded the Long Life Design Award by the Japan Institute of Design Promotion (JDP).

Green Label Plus mark

This certification system for the indoor air quality of carpet products was established by 'CRI', Carpet & Rug Institution in USA.

TOLI Ai Simulator

Image Fit

Easy Interior Simulation by Taking a Picture and Selecting!

TOLI Ai Simulator, Image Fit is a simulation system that can easily create an installation image by synthesizing the TOLI interior materials into your design space. TOLI Corporation is certified to ISO9001

TOLI Corporation is certified according to ISO14001 for carpet production.

<http://toli-overseas.com/>

Please visit our website to see E-catalogue and Library where the images can be picked up.

Notes on selection

- In the case of light-colored carpet, dirt tends to be more obvious. When selecting carpet, please bear in mind the above in the color selection.
- Please avoid using in locations where moisture is expected to rise constantly from the subfloor. Otherwise adhesion failure and bad smell could occur.

! Excess alkaline moisture in concrete-type subfloor may dissolve the plasticizer in PVC tile backing and emit an unpleasant alcohol-type odor.

- Before installation, be sure to check the moisture content of the subfloor, and if it is higher than 8%, dry out the sub-floor sufficiently.

- In some cases, there might be slight color difference between actual products and color swatches or images on the catalogue.
- This sample book is based on the information as of July 2025. It may be changed without prior notice.

Notes on installation

- To ensure the stickiness of TOLI ECO GA Cement and ECO GA Cement EX, begin installation only after you have applied the adhesive and it has become semi-transparent. After it has become semi-transparent, be careful not to lay the carpet tiles too closely together.

Notes on maintenance and use

- If dirt adheres to the carpet, please wipe it up promptly before it spreads. As time passes, the dirt will become more difficult to remove. Please also bear in mind that some type of contaminants cannot be removed.
- When you remove spots or stains, depending on the source of the stain, use a suitable stain remover or a neutral detergent, etc. Incorrect selection of a stain remover or detergent may result in even more discoloration.

! To maintain the beauty of the carpet and to protect from the dust, depending on the volume of foot traffic, carry out a daily maintenance with an electric cleaner or vacuum cleaner. In work spaces, in addition to daily maintenance, intensive cleaning on a regular basis is recommended, depending on the usage.

- When you use a vacuum cleaner with a brush, please be careful not to damage the surface piles.
- The use of chemicals or detergents with strong action, or liquids such as bleach, may result in discoloration or loss of color, or deterioration of the carpet itself. Please be sure not to spill such liquids.
- Using in certain environments, such as environments exposed to direct sunlight, may result in discoloration or loss of color. Please block out the sunlight using a curtain or blind, etc.
- Rubber products such as the rubber legs of certain types of furniture and rubber mats, as well as paint, preservatives or insecticides may stain the carpet and result in discoloration or loss of color. Please do not let such things touch the carpet directly.
- There may be indentation caused by the concentrated load, such as high heels or furniture. Please be cautious, especially when installing on raised floor which has some openings.
- Ventilation is recommended to eliminate material odor.

MADE IN JAPAN
